

MYSTIC MOON MINI-PHASE PRINTING INSTRUCTIONS

- 1) *Find your time zone at bottom of sheet*
- 2) *Print on letter size paper*
- 3) *Trim using crop marks to 8"x"10"*
- 4) *Frame and enjoy*

Enjoy a discount when you purchase from my shop full of beautiful charts and a few fun shirts and accessories.

Coupon code toward the end of this document.

COSMIC CALENDAR

ANNUAL VISUAL EPHEMERIS

It looks complicated, but it's just a circle graph. Let's break it down.

The Spiral Spectrum™ Synchronic System is a bridge from the Gregorian Grid, a social-political calendar, to the multi-dimensional natural cycles in our solar system. Colorful nested rings represent the Sun and Planets, while 365 Earth days are arranged as radiant rays to make up a circular grid where we plot heavenly happenings. Moon phases, meteor showers, eclipses and seasons can all be seen on this year-at-a-glance visual ephemeris as well as transits of the sun & planets and retrograde periods.

The combined result is a "skyway" transit schedule & solar system map so one can schedule their activities for the entire year.

SOLAR SYSTEM LEGEND

KEY

- EARTH** Live in all this year. Stay with cosmic cycles to harmonize in the frequency of love.
- SEASONS** A first & program for everything. Our sun marks the seasons in the frequency of love.
- CHAKRAS** Focus on a chakra, daily and align to the energetic wheel of the 4th Wheel.
- ZODIAC** Constellations are better connections setting the scene & flows for all other planet flows.
- MONTHS** The Gregorian grid is a date timeline. It alerts us out of rhythm to keep us in line.
- ORBITS** Our orbits connect them of their own means, influencing all from their place in space.
- RETROGRADE** A need to review, shed & re-experience with an opportunity to remedy the situation.
- DAY RAYS** Another ray details chakra interconnect, align, open, uplift, and extend from their place in space.
- MOON** Influences the mind with the proximity to Earth & humanity from her place in space.

OVERVIEW

COSMIC CLOCK

ANNUAL VISUAL EPHEMERIS

It looks complicated, but it's just a circle graph. Let's break it down.

The planets & our moon move at their own consistent pace, on a fixed, elliptical & predictable trajectory through space. This chart shows you where things are throughout the year.

365 DAYS

Each radiant rainbow ray represents a day. Shift "out of line" & sync with cyclical time.

START

New Year's Day is stacked with zodiac markers for the sign each is in when the year begins.

RINGS

The orbits of the Sun & Planets are represented by nested patterned rings.

TRANSITS

An ingress into a new zodiac sign is progress marked on that day's line.

RETROGRADE

Noted are apparent backward motions.

A "SKYWAY" TRANSIT SCHEDULE

Many learn to navigate a subway system with the help of a transit schedule, map and some practice. This visual ephemeris chart depicts our solar system's "skyway" with transits marked throughout the year as the sun & planets travel through the zodiac at their own pace. Planets closer to the sun travel faster through the zodiac, energetically influencing Earth in increments of weeks, months & years. Outer planets travel much slower and their influence is far more subtle – spanning decades, centuries and ages. This *Skyway Transit Schedule* features major transits & retrogrades of the largest bodies in our solar system through one Earth year.

It's about time.

APOGEE
Max. Closeness

PERIGEE
Max. Distance

PROXIMITY

The moon is magnified when her elliptical orbit brings her close. Her influence lessens when her elliptical path is far from Earth.

PHASES & ECLIPSES

Moon phases shown for the entire year, shown as they appear in the northern hemisphere.

SEASONS

Equinox & Solstice

SHOOTING STARS

Meteor shower streaks noted at their peaks! Best taken in when the moonlight is dim.

OVERVIEW

LUNASOL DIAL

ANNUAL VISUAL EPHEMERIS

It looks complicated, but it's just a circle graph. Let's break it down.

The Earth & Moon move at their own consistent pace on a fixed, elliptical & predictable trajectory through space. This chart shows you where things are throughout the year.

365 SOLAR DAYS

Each radiant rainbow ray represents a day. Shift "out of line" & sync with cyclical time.

PHASES & ECLIPSES

Moon phases shown for the entire year, shown as the appear in the northern hemisphere.

EXACTITUDE

Exact moon phase is noted appx every 7 days. A revolution around Earth is 28.5 days, so the moon transits signs every 2.5 days.

LUNAR TRANSITS

An ingress into a new zodiac sign is progress marked on that day's line like beads on a string making a never-ending fire, earth, air and water color-coded ring.

A LUNISOLAR TRANSIT SCHEDULE

Earth's dimmer switch, our Lunar nightlight, sets the mood with its luminosity while impacting the gravitational pull with its proximity. Many believe her place in space makes the case for optimal activities.

This visual ephemeris chart depicts our lunisolar transits, marked throughout the year as the sun & moon travel the zodiac at their own pace through space.

Phase, place & proximity are shown with exactitude so you can adjust your activity & attitude.

Attune to what the moon has to say and learn to dance with ease & grace every day through fire, earth, air and water.

It's about time.

APOGEE
Max. Closeness

PERIGEE
Max. Distance

PROXIMITY

The moon is magnified when her elliptical orbit brings her close. Her influence lessens when her elliptical path is far from Earth.

SOLAR TRANSITS & SEASONS

Sun transits thru the signs on that days line.

SHOOTING STARS

Meteor shower streaks noted at their peaks! Best taken in when the moonlight is dim.

An ephemeris is a transit schedule of arrivals (ingress) & departures (egress) of the celestial bodies to relay where everything is located in the zodiac at a particular moment. An ephemeris is simply a chart of astronomic data points – mathematical coordinates of space objects calculated from a fixed location.
