

2017 CELESTIAL CHARTS: *Transits & Motions for the Sun & Planets*

HOW TO READ THIS: Lets look at January. The Sun starts the year in Capricorn  then transits into Aquarius  on the 19th at 4:23pm. Next, Mercury transits twice: on the 4th it moves into Sagittarius  & on the 12th into Capricorn . Mercury also starts the year in Retrograde (Rx), but moves Direct (D) on the 8th. Venus moves into Pisces  on the 3rd, and Mars moves into Aries  on the 28th. ***** Refer to the **Overview of the Cosmic Clock** at the back of the calendar for an example of how to place stickers. *****

This chart gives you the major transits of the sun & each planet with visual aides that match our synchronic system. The date and time information lets you know where to place the matching zodiac sticker (enclosed) on the solar system mandala for each month. Each nested circle in the monthly mandala is patterned to match the orbits of the celestial bodies & those patterns are included below as a visual aid as well. It also tells you when a planet's motion goes Retrograde (Rx) and when it starts moving Direct (D) again inside the solid grey boxes.

Starting Sign	JANUARY	FEBRUARY	MARCH	APRIL	MAY	JUNE	JULY	AUGUST	SEPTEMBER	OCTOBER	NOVEMBER	DECEMBER

TROPICAL MIDNIGHT EPHEMERIS

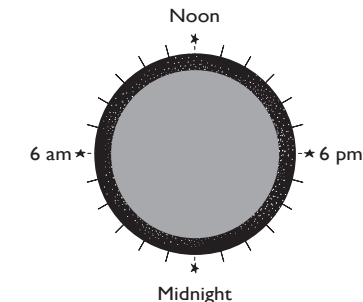

2017 CELESTIAL CHART

Moon Transits, Eclipses & Void of Course

This chart is focused fully on the moon. It tells you the date and time that the moon transits into a new sign, which happens approximately every 2.5 days. The date and time information lets you know where to place the matching zodiac sticker (enclosed) on the Moon Dial for each month. It will also let you know the exact times of the solar & lunar eclipses as well as the new, full and quarter moons. For advanced moon geeks, we've also included the start time (*light grey italic text above the zodiac symbol*) for when the moon goes "void."

HOW TO READ THIS: If you look at the box for January 2nd, you'll see the symbol for Pisces. The time below is the exact moment that the moon moves (or "transits") into Pisces. The time above refers to the moment the moon goes "void" - which lasts until the moon transits into the next sign. So, on January 2nd, the moon goes void at 2:59am EST & the void ends at 4:56am EST, exactly when the moon moves into Pisces. Sometimes the void begins the day prior - that is not a mistake, it is just a longer void period. Please refer to the **Overview of the Cosmic Clock** at the back of the calendar for an example of how to place stickers.

VOID OF COURSE
A window of time lasting minutes or days when the moon has "run out of steam." Until entering the next sign, things may be foggy and motivation is low. Not an optimal time for important decisions or new beginnings. Relax and be low key.

DAY DIAL

Each day has a hidden 24 hour dial for you to use however you like. Perhaps you want to shade around the dial when the moon is void or show sunrise and sunset.
